

ETV6 fusion-hotspot benchmark report

Study: thca_tcga_pan_can_atlas_2018

Abstract

This report analyzes ETV6 gene fusions from the thca_tcga_pan_can_atlas_2018 study, covering 6 fusion events. 6/6 fusions (100.0%) were in-frame. 5/6 fusions (83.3%) retained the Sterile alpha motif (SAM)/Pointed domain. Domain retention was tested with Fisher's exact test ($p=1$, not statistically significant at $\alpha=0.05$). No literature benchmark is configured for ETV6.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 6 analyzed fusion events, identifying 1 distinct fusion partner gene. The most frequent partner was NTRK3, observed in 6 events.

Domain retention

Sterile alpha motif (SAM)/Pointed domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 5/6 (83.3%) of in-frame fusions retained the domain, $p=1$ (not statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 1.

Domain disruption

Domain-disruption analysis was skipped: ETV6 has no disruption_required_domains configured; domain-disruption analysis was skipped.

Cutpoint detection

Cutpoint detection could not determine a breakpoint boundary for this run: fewer than 2 distinct breakpoint positions to scan

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" ($n=5$) and "not_retained" ($n=1$). For Frame_status, retained: 5/5 (100.0%, 95% CI 56.6%-100.0%); not_retained: 1/1 (100.0%, 95% CI 20.7%-100.0%). Welch's t-test comparing Tumor_variant_count between groups gave means of unavailable vs unavailable, $p=unavailable$.

Composite evidence score

Composite evidence score reported: domain_disruption sub-score excluded: the supplied result had no applicable p-value (e.g. disruption_required_domains not configured for this gene).

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: ETV6: domain-retention expression-split comparison skipped; each group needs ≥ 2 fusion-positive samples with expression data (retained=5, not_retained=1).

Genomic position recurrence

Genomic position recurrence produced results for this run (2 row(s) in genomic_bin_recurrence, 1 row(s) in exact_position_recurrence, 1 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: ETV6 has no gene_pair configured; joint-partner analysis was skipped.

Mutation cooccurrence

Mutation cooccurrence reported: ETV6 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection reported: fewer than 2 distinct breakpoint positions to scan
