ETV6 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes ETV6 gene fusions from the msk_impact_50k_2026 study, covering 90 fusion events. 64/79 fusions with known frame status (81.0%) were in-frame. 68/88 fusions (77.3%) retained the Sterile alpha motif (SAM)/Pointed domain. Domain retention was tested with Fisher's exact test (p=0.000290182, statistically significant at alpha=0.05). No literature benchmark is configured for ETV6.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 90 analyzed fusion events, identifying 27 distinct fusion partner genes. The most frequent partner was NTRK3, observed in 55 events.

Domain retention

Sterile alpha motif (SAM)/Pointed domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 58/64 (90.6%) of in-frame fusions retained the domain, p=0.000290182 (statistically significant at alpha=0.05). The Sterile alpha motif (SAM)/Pointed domain appears to be required for retention. A breakpoint-position permutation test produced a corroborating empirical p-value of 9.9999e-06.

Domain disruption

Domain-disruption analysis was skipped: ETV6 has no disruption_required_domains configured; domain-disruption analysis was skipped.

Junction concentration

65% of 46 fusions with this gene as the 5' partner join at exon 5, against 6% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=9.9999e-06, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 62 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 155 aa (exon 4/5 boundary; label-permutation p=0.293706). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is 32 aa from the nearest configured domain boundary at 123 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=46) and "not_retained" (n=16). For Frame_status, retained: 38/44 (86.4%, 95% CI 73.3%-93.6%); not_retained: 5/11 (45.5%, 95% CI 21.3%-72.0%). Welch's t-test comparing Tumor_variant_count between groups gave means of 63.5217 vs 33.1875, p=0.0492695 (statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score reported: domain_disruption sub-score excluded: the supplied result had no applicable p-value (e.g. disruption_required_domains not configured for this gene).

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for ETV6 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (29 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 2 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: ETV6 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run (5 row(s) in retention_counter_intuitive_events, 2 row(s) in retention_counter_intuitive_recurrent_partners); see the accompanying table.

Mutation cooccurrence

Mutation cooccurrence reported: ETV6 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (19 row(s) in window_scan, 5 row(s) in top_windows); see the accompanying table.
