

CDK12 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes CDK12 gene fusions from the msk_impact_50k_2026 study, covering 43 fusion events. 7/43 fusions (16.3%) were in-frame. 16/43 fusions (37.2%) retained the Protein kinase domain. Domain retention was tested with Fisher's exact test ($p=0.0677006$, not statistically significant at $\alpha=0.05$). No literature benchmark is configured for CDK12.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 43 analyzed fusion events, identifying 29 distinct fusion partner genes. The most frequent partner was FBXL20, observed in 6 events.

Domain retention

Protein kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 5/7 (71.4%) of in-frame fusions retained the domain, $p=0.0677006$ (not statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.316832.

Domain disruption

Domain-disruption analysis was skipped: CDK12 has no disruption_required_domains configured; domain-disruption analysis was skipped.

Cutpoint detection

Cutpoint detection scanned 41 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 644 aa (exon 2/3 boundary; permutation-corrected $p=0.00990099$, statistically significant at $\alpha=0.05$). This is -84 aa from the nearest configured domain boundary at 728 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" ($n=16$) and "not_retained" ($n=25$). For Frame_status, retained: 5/7 (71.4%, 95% CI 35.9%-91.8%); not_retained: 2/7 (28.6%, 95% CI 8.2%-64.1%). Welch's t-test comparing Tumor_variant_count between groups gave means of 20.8125 vs 43.4, $p=0.0502833$ (not statistically significant at $\alpha=0.05$).

Composite evidence score

Composite evidence score reported: domain_disruption sub-score excluded: the supplied result had no applicable p-value (e.g. disruption_required_domains not configured for this gene).

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for CDK12 in this cohort; expression-association analysis was skipped.

Joint partner

Joint partner reported: CDK12 has no gene_pair configured; joint-partner analysis was skipped.

Mutation cooccurrence

Mutation cooccurrence reported: CDK12 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (92 row(s) in window_scan, 51 row(s) in top_windows); see the accompanying table.

domain retention outliers

CDK12 domain-retention track

fusion schematic

CDK12 fusion-transcript schematic

Fusion order varies by row; follow each row's 5' and 3' labels (CDK12 portion is domain-colored, exon ticks). Partner-gene blocks share one color; row labels identify each partner.

Partner-block colors are decorative; row labels identify partners.

Showing the top 28 of 36 partner/breakpoint groups by recurrence; see results.tsv for the complete list.
