

RET fusion-hotspot benchmark report

Study: thca_tcga_pan_can_atlas_2018

Abstract

This report analyzes RET gene fusions from the thca_tcga_pan_can_atlas_2018 study, covering 36 fusion events. 35/36 fusions (97.2%) were in-frame. 33/36 fusions (91.7%) retained the Protein kinase domain. Domain retention was tested with Fisher's exact test ($p=0.0833333$, not statistically significant at $\alpha=0.05$). Compared to the literature benchmark (PMCID: PMC6430196 (KIF5B-RET): 100.0% in-frame, 100.0% domain-retained), this run observed 97.2% in-frame and 91.7% domain retention.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 36 analyzed fusion events, identifying 10 distinct fusion partner genes. The most frequent partner was CCDC6, observed in 22 events.

Domain retention

Protein kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 33/35 (94.3%) of in-frame fusions retained the domain, $p=0.0833333$ (not statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.000999001.

Domain disruption

Disruption of the Cadherin domain was tested with Fisher's exact test comparing in-frame fusions against all others; 33/35 (94.3%) of in-frame fusions disrupted the domain, $p=0.0833333$ (not statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.436356.

Cutpoint detection

Cutpoint detection scanned 36 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 712 aa (exon 11; permutation-corrected $p=0.000999001$, statistically significant at $\alpha=0.05$). This is -13 aa from the nearest configured domain boundary at 725 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" ($n=33$) and "not_retained" ($n=3$). For Frame_status, retained: 33/33 (100.0%, 95% CI 89.6%-100.0%); not_retained: 2/2 (100.0%, 95% CI 34.2%-100.0%). Welch's t-test comparing Tumor_variant_count between groups gave means of unavailable vs unavailable, $p=unavailable$.

Composite evidence score

Composite evidence score produced results for this run (10 row(s) in composite_evidence_ranking); see the accompanying table.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association produced results for this run; see the accompanying data for details.

Joint partner

Joint partner reported: RET has no gene_pair configured; joint-partner analysis was skipped.

Mutation cooccurrence

Mutation cooccurrence reported: RET has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (6 row(s) in window_scan, 2 row(s) in top_windows); see the accompanying table.

domain retention outliers

RET domain-retention track

fusion schematic

RET fusion-transcript schematic

Fusion order varies by row; follow each row's 5' and 3' labels (RET portion is domain-colored, exon ticks). Partner-gene blocks share one color; row labels identify each partner.
