

FGFR2 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes FGFR2 gene fusions from the msk_impact_50k_2026 study, covering 136 fusion events. 108/136 fusions (79.4%) were in-frame. 115/136 fusions (84.6%) retained the Protein tyrosine and serine/threonine kinase domain. Domain retention was tested with Fisher's exact test ($p=0.000424687$, statistically significant at $\alpha=0.05$). No literature benchmark is configured for FGFR2.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 136 analyzed fusion events, identifying 78 distinct fusion partner genes. The most frequent partner was BICC1, observed in 28 events.

Domain retention

Protein tyrosine and serine/threonine kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 99/108 (91.7%) of in-frame fusions retained the domain, $p=0.000424687$ (statistically significant at $\alpha=0.05$). The Protein tyrosine and serine/threonine kinase appears to be required for retention. A breakpoint-position permutation test produced a corroborating empirical p-value of 0.00990099.

Domain disruption

Disruption of the Immunoglobulin domain and Immunoglobulin I-set domain was tested with Fisher's exact test comparing in-frame fusions against all others; 9/108 (8.3%) of in-frame fusions disrupted the domain, $p=0.989695$ (not statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.792079.

Cutpoint detection

Cutpoint detection scanned 134 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 767 aa (exon 17; permutation-corrected $p=0.00990099$, statistically significant at $\alpha=0.05$). This is 10 aa from the nearest configured domain boundary at 757 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" ($n=115$) and "not_retained" ($n=19$). For Frame_status, retained: 99/102 (97.1%, 95% CI 91.7%-99.0%); not_retained: 9/14 (64.3%, 95% CI 38.8%-83.7%). Welch's t-test comparing Tumor_variant_count between groups gave means of 104.965 vs 61.8947, $p=0.20677$ (not statistically significant at $\alpha=0.05$).

Composite evidence score

Composite evidence score produced results for this run (78 row(s) in composite_evidence_ranking); see the accompanying table.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for FGFR2 in this cohort; expression-association analysis was skipped.

Joint partner

Joint partner reported: FGFR2 has no gene_pair configured; joint-partner analysis was skipped.

Mutation cooccurrence

Mutation cooccurrence reported: FGFR2 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (32 row(s) in window_scan, 19 row(s) in top_windows); see the accompanying table.

domain retention outliers

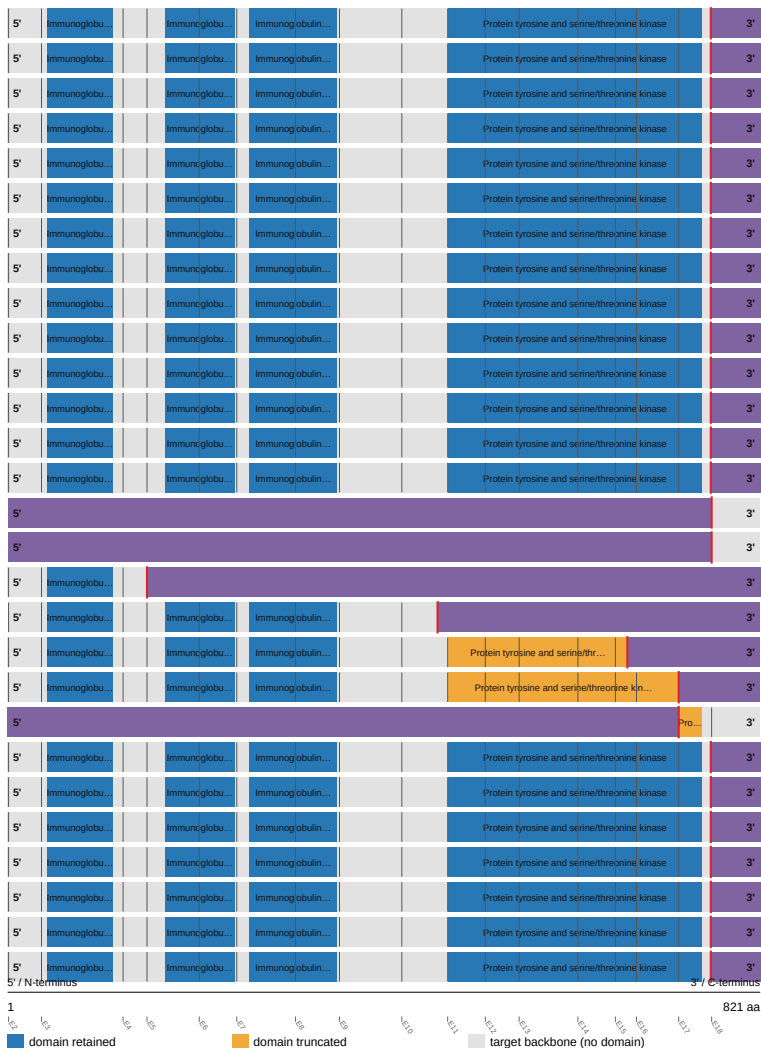

FGFR2 domain-retention track

fusion schematic

FGFR2 fusion-transcript schematic

Fusion order varies by row; follow each row's 5' and 3' labels (FGFR2 portion is domain-colored, exon ticks). Partner-gene blocks share one color; row labels identify each partner.

Partner-block colors are decorative; row labels identify partners.

Showing the top 28 of 84 partner/breakpoint groups by recurrence; see results.tsv for the complete list.
