RPS6KA4 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes RPS6KA4 gene fusions from the msk_impact_50k_2026 study, covering 13 fusion events. 5/8 fusions with known frame status (62.5%) were in-frame. 7/12 fusions (58.3%) retained the Protein kinase domain. Domain retention was tested with Fisher's exact test (p=0.261905, not statistically significant at alpha=0.05). No literature benchmark is configured for RPS6KA4.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 13 analyzed fusion events, identifying 12 distinct fusion partner genes. The most frequent partner was BAD, observed in 2 events.

Domain retention

Protein kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 4/5 (80.0%) of in-frame fusions retained the domain, p=0.261905 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.415842.

Domain disruption

Disruption of the Protein kinase domain and Protein kinase C terminal domain was tested with Fisher's exact test comparing in-frame fusions against all others; 1/4 (25.0%) of in-frame fusions disrupted the domain, p=0.97619 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.970297.

Junction concentration

50% of 6 fusions with this gene as the 3' partner join at exon 6, against 2% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=0.003996, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 10 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 209 aa (exon 6; label-permutation p=0.0719281). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is -92 aa from the nearest configured domain boundary at 301 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=5) and "not_retained" (n=5). For Frame_status, retained: 3/4 (75.0%, 95% CI 30.1%-95.4%); not_retained: 1/3 (33.3%, 95% CI 6.1%-79.2%). Welch's t-test comparing Tumor_variant_count between groups gave means of 30.8 vs 51.4, p=0.362096 (not statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score reported: cutpoint_proximity sub-score excluded: corrected cutpoint p-value was missing or >= 0.05, cutpoint was not determinable, or mapped breakpoints were unavailable.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for RPS6KA4 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (6 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 1 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: RPS6KA4 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run; see the accompanying data for details.

Mutation cooccurrence

Mutation cooccurrence reported: RPS6KA4 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (13 row(s) in window_scan, 5 row(s) in top_windows); see the accompanying table.
