# FGFR3 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

# Abstract

This report analyzes FGFR3 gene fusions from the msk_impact_50k_2026 study, covering 152 fusion events. 74/76 fusions with known frame status (97.4%) were in-frame. 142/151 fusions (94.0%) retained the Protein tyrosine and serine/threonine kinase domain. Domain retention was tested with Fisher's exact test (p=0.0194679, statistically significant at alpha=0.05). No literature benchmark is configured for FGFR3.

# Results summary

## Fusion partner frequency

Fusion-partner frequency was tabulated across 152 analyzed fusion events, identifying 15 distinct fusion partner genes. The most frequent partner was TACC3, observed in 131 events.

## Domain retention

Protein tyrosine and serine/threonine kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 73/74 (98.6%) of in-frame fusions retained the domain, p=0.0194679 (statistically significant at alpha=0.05). The Protein tyrosine and serine/threonine kinase appears to be required for retention. A breakpoint-position permutation test produced a corroborating empirical p-value of 9.9999e-06.

## Domain disruption

Disruption of the Immunoglobulin domain and Immunoglobulin I-set domain was tested with Fisher's exact test comparing in-frame fusions against all others; 1/65 (1.5%) of in-frame fusions disrupted the domain, p=0.934627 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 1.

## Junction concentration

56% of 128 fusions with this gene as the 5' partner join at exon 16, against 2% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=9.9999e-06, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

## Cutpoint detection

Cutpoint detection scanned 133 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 677 aa (exon 14/15 boundary; label-permutation p=0.000999001). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is -71 aa from the nearest configured domain boundary at 748 aa.

## Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=124) and "not_retained" (n=9). For Frame_status, retained: 64/65 (98.5%, 95% CI 91.8%-99.7%); not_retained: 1/2 (50.0%, 95% CI 9.5%-90.5%). Welch's t-test comparing Tumor_variant_count between groups gave means of 113.589 vs 37.4444, p=0.00784055 (statistically significant at alpha=0.05).

## Composite evidence score

Composite evidence score produced results for this run (15 row(s) in composite_evidence_ranking); see the accompanying table.

## Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

## Expression association

Expression association reported: No mRNA expression data was available for FGFR3 in this cohort; expression-association analysis was skipped.

## Genomic position recurrence

Genomic position recurrence produced results for this run (8 row(s) in genomic_bin_recurrence, 18 row(s) in exact_position_recurrence, 17 row(s) in protein_position_genomic_spread); see the accompanying table.

## Joint partner

Joint partner reported: FGFR3 has no gene_pair configured; joint-partner analysis was skipped.

## Mechanistic interpretation

Mechanistic interpretation produced results for this run (1 row(s) in retention_counter_intuitive_events); see the accompanying table.

## Mutation cooccurrence

Mutation cooccurrence reported: FGFR3 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

## Window detection

Window detection produced results for this run (245 row(s) in window_scan, 135 row(s) in top_windows); see the accompanying table.
