NRG1 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes NRG1 gene fusions from the msk_impact_50k_2026 study, covering 15 fusion events. 8/8 fusions with known frame status (100.0%) were in-frame. 13/15 fusions (86.7%) retained the Neuregulin intracellular region domain. Domain retention was tested with Fisher's exact test (p=0.227273, not statistically significant at alpha=0.05). No literature benchmark is configured for NRG1.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 15 analyzed fusion events, identifying 6 distinct fusion partner genes. The most frequent partner was CD74, observed in 9 events.

Domain retention

Neuregulin intracellular region domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 8/8 (100.0%) of in-frame fusions retained the domain, p=0.227273 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.732673.

Domain disruption

Disruption of the Immunoglobulin I-set domain and Human growth factor-like EGF was tested with Fisher's exact test comparing in-frame fusions against all others; 5/6 (83.3%) of in-frame fusions disrupted the domain, p=0.772727 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.594059.

Junction concentration

100% of 8 fusions with this gene as the 3' partner join at exon 6, against 51% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=0.043956, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 12 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 1 aa (exon 1; label-permutation p=0.0909091). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is -40 aa from the nearest configured domain boundary at 41 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=10) and "not_retained" (n=2). For Frame_status, retained: 6/6 (100.0%, 95% CI 61.0%-100.0%); not_retained: 0/0 (unavailable, 95% CI unavailable-unavailable). Welch's t-test comparing Tumor_variant_count between groups gave means of 27.4 vs 39.5, p=0.575883 (not statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score reported: cutpoint_proximity sub-score excluded: corrected cutpoint p-value was missing or >= 0.05, cutpoint was not determinable, or mapped breakpoints were unavailable.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for NRG1 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (12 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 2 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: NRG1 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run; see the accompanying data for details.

Mutation cooccurrence

Mutation cooccurrence reported: NRG1 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (14 row(s) in window_scan, 2 row(s) in top_windows); see the accompanying table.
