POLD1 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes POLD1 gene fusions from the msk_impact_50k_2026 study, covering 16 fusion events. 2/6 fusions with known frame status (33.3%) were in-frame. 6/13 fusions (46.2%) retained the DNA polymerase family B domain. Domain retention was tested with Fisher's exact test (p=0.192308, not statistically significant at alpha=0.05). No literature benchmark is configured for POLD1.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 16 analyzed fusion events, identifying 15 distinct fusion partner genes. The most frequent partner was MYH14, observed in 2 events.

Domain retention

DNA polymerase family B domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 2/2 (100.0%) of in-frame fusions retained the domain, p=0.192308 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.031968.

Domain disruption

Disruption of the DNA polymerase family B, exonuclease domain was tested with Fisher's exact test comparing in-frame fusions against all others; 1/2 (50.0%) of in-frame fusions disrupted the domain, p=0.871795 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.792079.

Junction concentration

22% of 9 fusions with this gene as the 3' partner join at exon 5, against 1% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=0.01998, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 13 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 415 aa (exon 11; label-permutation p=0.010989). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is -62 aa from the nearest configured domain boundary at 477 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=6) and "not_retained" (n=7). For Frame_status, retained: 2/3 (66.7%, 95% CI 20.8%-93.9%); not_retained: 0/3 (0.0%, 95% CI 0.0%-56.1%). Welch's t-test comparing Tumor_variant_count between groups gave means of 24.8333 vs 43, p=0.299234 (not statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score produced results for this run (15 row(s) in composite_evidence_ranking); see the accompanying table.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for POLD1 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (8 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 0 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: POLD1 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run; see the accompanying data for details.

Mutation cooccurrence

Mutation cooccurrence reported: POLD1 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (6 row(s) in window_scan, 4 row(s) in top_windows); see the accompanying table.
