

FH fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes FH gene fusions from the msk_impact_50k_2026 study, covering 16 fusion events. 1/16 fusions (6.2%) were in-frame. 2/16 fusions (12.5%) retained the Lyase domain. Domain retention was tested with Fisher's exact test ($p=0.133333$, not statistically significant at $\alpha=0.05$). No literature benchmark is configured for FH.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 16 analyzed fusion events, identifying 11 distinct fusion partner genes. The most frequent partner was DGKH, observed in 5 events.

Domain retention

Lyase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 1/1 (100.0%) of in-frame fusions retained the domain, $p=0.133333$ (not statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.287129.

Domain disruption

Domain-disruption analysis was skipped: FH has no disruption_required_domains configured; domain-disruption analysis was skipped.

Cutpoint detection

Cutpoint detection scanned 15 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 45 aa (permutation-corrected $p=0.0689311$, not statistically significant at $\alpha=0.05$). This is -13 aa from the nearest configured domain boundary at 58 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" ($n=2$) and "not_retained" ($n=13$). For Frame_status, retained: 1/1 (100.0%, 95% CI 20.7%-100.0%); not_retained: 0/5 (0.0%, 95% CI 0.0%-43.4%). Welch's t-test comparing Tumor_variant_count between groups gave means of 12 vs 29.3077, $p=0.0682804$ (not statistically significant at $\alpha=0.05$).

Composite evidence score

Composite evidence score reported: domain_disruption sub-score excluded: the supplied result had no applicable p-value (e.g. disruption_required_domains not configured for this gene).

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Joint partner

Joint partner reported: FH has no gene_pair configured; joint-partner analysis was skipped.
