NAB2 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes NAB2 gene fusions from the msk_impact_50k_2026 study, covering 72 fusion events. 25/35 fusions with known frame status (71.4%) were in-frame. 49/71 fusions (69.0%) retained the NAB conserved region 2 (NCD2) domain. Domain retention was tested with Fisher's exact test (p=0.179862, not statistically significant at alpha=0.05). No literature benchmark is configured for NAB2.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 72 analyzed fusion events, identifying 14 distinct fusion partner genes. The most frequent partner was STAT6, observed in 53 events.

Domain retention

NAB conserved region 2 (NCD2) domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 20/25 (80.0%) of in-frame fusions retained the domain, p=0.179862 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.00019998.

Domain disruption

Disruption of the NAB conserved region 1 (NCD1) SAM domain was tested with Fisher's exact test comparing in-frame fusions against all others; 1/24 (4.2%) of in-frame fusions disrupted the domain, p=0.996891 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 1.

Junction concentration

70% of 53 fusions with this gene as the 5' partner join at exon 6, against 18% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=9.9999e-06, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 64 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 372 aa (exon 4; label-permutation p=0.000999001). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is 6 aa from the nearest configured domain boundary at 366 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=45) and "not_retained" (n=19). For Frame_status, retained: 19/20 (95.0%, 95% CI 76.4%-99.1%); not_retained: 5/11 (45.5%, 95% CI 21.3%-72.0%). Welch's t-test comparing Tumor_variant_count between groups gave means of 58.0222 vs 87.2105, p=0.267001 (not statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score produced results for this run (14 row(s) in composite_evidence_ranking); see the accompanying table.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for NAB2 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (5 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 4 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: NAB2 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run; see the accompanying data for details.

Mutation cooccurrence

Mutation cooccurrence reported: NAB2 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (93 row(s) in window_scan, 54 row(s) in top_windows); see the accompanying table.
