TPM3 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes TPM3 gene fusions from the msk_impact_50k_2026 study, covering 14 fusion events. 11/11 fusions with known frame status (100.0%) were in-frame. 9/14 fusions (64.3%) retained the Tropomyosin domain. Domain retention was tested with Fisher's exact test (p=1, not statistically significant at alpha=0.05). No literature benchmark is configured for TPM3.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 14 analyzed fusion events, identifying 2 distinct fusion partner genes. The most frequent partner was NTRK1, observed in 12 events.

Domain retention

Tropomyosin domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 6/11 (54.5%) of in-frame fusions retained the domain, p=1 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 1.99998e-05.

Domain disruption

Domain-disruption analysis was skipped: TPM3 has no disruption_required_domains configured; domain-disruption analysis was skipped.

Junction concentration

Junction concentration could not be tested for this run: 4 event(s) with a known junction exon inside the transcript; at least 5 are needed

Cutpoint detection

Cutpoint detection scanned 11 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 259 aa (exon 8/9 boundary; label-permutation p=0.003996). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is -25 aa from the nearest configured domain boundary at 284 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=8) and "not_retained" (n=3). For Frame_status, retained: 6/6 (100.0%, 95% CI 61.0%-100.0%); not_retained: 3/3 (100.0%, 95% CI 43.9%-100.0%). Welch's t-test comparing Tumor_variant_count between groups gave means of 26.75 vs 62.6667, p=0.0927984 (not statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score reported: domain_disruption sub-score excluded: the supplied result had no applicable p-value (e.g. disruption_required_domains not configured for this gene).

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for TPM3 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (9 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 2 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: TPM3 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run; see the accompanying data for details.

Mutation cooccurrence

Mutation cooccurrence reported: TPM3 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (7 row(s) in window_scan, 2 row(s) in top_windows); see the accompanying table.
