

ALK fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes ALK gene fusions from the msk_impact_50k_2026 study, covering 272 fusion events. 226/232 fusions with known frame status (97.4%) were in-frame. 261/271 fusions (96.3%) retained the Protein kinase domain. Domain retention was tested with Fisher's exact test ($p=0.00191661$, statistically significant at $\alpha=0.05$). No literature benchmark is configured for ALK.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 272 analyzed fusion events, identifying 32 distinct fusion partner genes. The most frequent partner was EML4, observed in 221 events.

Domain retention

Protein kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 222/226 (98.2%) of in-frame fusions retained the domain, $p=0.00191661$ (statistically significant at $\alpha=0.05$). The Protein kinase domain appears to be required for retention. A breakpoint-position permutation test produced a corroborating empirical p-value of 0.000999001.

Domain disruption

Domain-disruption analysis was skipped: ALK has no disruption_required_domains configured; domain-disruption analysis was skipped.

Cutpoint detection

Cutpoint detection scanned 271 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 972 aa (exon 17/18 boundary; permutation-corrected $p=0.000999001$, statistically significant at $\alpha=0.05$). This is 12 aa from the nearest configured domain boundary at 960 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" ($n=261$) and "not_retained" ($n=10$). For Frame_status, retained: 222/227 (97.8%, 95% CI 94.9%-99.1%); not_retained: 4/5 (80.0%, 95% CI 37.6%-96.4%). Welch's t-test comparing Tumor_variant_count between groups gave means of 65.6139 vs 31.8, $p=0.00432792$ (statistically significant at $\alpha=0.05$).

Composite evidence score

Composite evidence score reported: domain_disruption sub-score excluded: the supplied result had no applicable p-value (e.g. disruption_required_domains not configured for this gene).

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for ALK in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (8 row(s) in genomic_bin_recurrence, 43 row(s) in exact_position_recurrence, 7 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: ALK has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run (4 row(s) in retention_counter_intuitive_events, 1 row(s) in retention_counter_intuitive_recurrent_partners); see the accompanying table.

Mutation cooccurrence

Mutation cooccurrence reported: ALK has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (119 row(s) in window_scan, 65 row(s) in top_windows); see the accompanying table.

Figures

domain retention outliers

ALK domain-retention track

fusion schematic

ALK fusion-transcript schematic

Fusion order varies by row; follow each row's 5' and 3' labels (ALK portion is domain-colored, exon ticks). Partner-gene blocks share one color; row labels identify each partner.

Partner-block colors are decorative; row labels identify partners.
Showing the top 28 of 50 partner/breakpoint groups by recurrence; see results.tsv for the complete list.

intragenic deletion schematic

ALK intragenic-deletion schematic

retained N-terminal block → deleted span (plain connector) → resumed C-terminal block
