FGFR2 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes FGFR2 gene fusions from the msk_impact_50k_2026 study, covering 136 fusion events. 108/116 fusions with known frame status (93.1%) were in-frame. 115/134 fusions (85.8%) retained the Protein kinase domain. Domain retention was tested with Fisher's exact test (p=0.00226743, statistically significant at alpha=0.05). No literature benchmark is configured for FGFR2.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 136 analyzed fusion events, identifying 78 distinct fusion partner genes. The most frequent partner was BICC1, observed in 28 events.

Domain retention

Protein kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 99/108 (91.7%) of in-frame fusions retained the domain, p=0.00226743 (statistically significant at alpha=0.05). The Protein kinase domain appears to be required for retention. A breakpoint-position permutation test produced a corroborating empirical p-value of 0.000999001.

Domain disruption

Disruption of the C-terminal autoinhibitory tail (exon 18) was tested with Fisher's exact test comparing in-frame fusions against all others; 88/95 (92.6%) of in-frame fusions disrupted the domain, p=0.154955 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.385614.

Junction concentration

93% of 108 fusions with this gene as the 5' partner join at exon 17, against 3% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=0.000999001, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 119 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 767 aa (exon 17; label-permutation p=0.000999001). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is 10 aa from the nearest configured domain boundary at 757 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=104) and "not_retained" (n=15). For Frame_status, retained: 88/91 (96.7%, 95% CI 90.8%-98.9%); not_retained: 7/12 (58.3%, 95% CI 32.0%-80.7%). Welch's t-test comparing Tumor_variant_count between groups gave means of 107.933 vs 65.5333, p=0.262021 (not statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score produced results for this run (78 row(s) in composite_evidence_ranking); see the accompanying table.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for FGFR2 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (9 row(s) in genomic_bin_recurrence, 1 row(s) in exact_position_recurrence, 3 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: FGFR2 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run (7 row(s) in retention_counter_intuitive_events, 1 row(s) in retention_counter_intuitive_recurrent_partners); see the accompanying table.

Mutation cooccurrence

Mutation cooccurrence produced results for this run (1 row(s) in cooccurrence_results); see the accompanying table.

Window detection

Window detection produced results for this run (32 row(s) in window_scan, 19 row(s) in top_windows); see the accompanying table.
