NTRK1 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes NTRK1 gene fusions from the msk_impact_50k_2026 study, covering 78 fusion events. 32/44 fusions with known frame status (72.7%) were in-frame. 64/76 fusions (84.2%) retained the Protein kinase domain. Domain retention was tested with Fisher's exact test (p=0.0514497, not statistically significant at alpha=0.05). No literature benchmark is configured for NTRK1.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 78 analyzed fusion events, identifying 43 distinct fusion partner genes. The most frequent partner was LMNA, observed in 12 events.

Domain retention

Protein kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 30/32 (93.8%) of in-frame fusions retained the domain, p=0.0514497 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.010989.

Domain disruption

Domain-disruption analysis was skipped: NTRK1 has no disruption_required_domains configured; domain-disruption analysis was skipped.

Junction concentration

21% of 53 fusions with this gene as the 3' partner join at exon 10, against 1% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=0.000999001, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 63 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 501 aa (exon 12/13 boundary; label-permutation p=0.022977). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is -11 aa from the nearest configured domain boundary at 512 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=51) and "not_retained" (n=12). For Frame_status, retained: 24/28 (85.7%, 95% CI 68.5%-94.3%); not_retained: 2/8

(25.0%, 95% CI 7.1%-59.1%). Welch's t-test comparing Tumor_variant_count between groups gave means of 66.098 vs 43.25, p=0.243044 (not statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score reported: domain_disruption sub-score excluded: the supplied result had no applicable p-value (e.g. disruption_required_domains not configured for this gene).

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for NTRK1 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (12 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 7 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: NTRK1 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run; see the accompanying data for details.

Mutation cooccurrence

Mutation cooccurrence reported: NTRK1 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (159 row(s) in window_scan, 116 row(s) in top_windows); see the accompanying table.

Figures

domain retention outliers

fusion schematic

Partner-block colors are decorative; row labels identify partners.

Showing the top 28 of 53 partner/breakpoint groups by recurrence; see results.tsv for the complete list.

intragenic deletion schematic
