ROS1 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes ROS1 gene fusions from the msk_impact_50k_2026 study, covering 122 fusion events. 72/99 fusions with known frame status (72.7%) were in-frame. 107/118 fusions (90.7%) retained the Protein kinase domain. Domain retention was tested with Fisher's exact test (p=0.186019, not statistically significant at alpha=0.05). No literature benchmark is configured for ROS1.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 122 analyzed fusion events, identifying 30 distinct fusion partner genes. The most frequent partner was CD74, observed in 55 events.

Domain retention

Protein kinase domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 67/72 (93.1%) of in-frame fusions retained the domain, p=0.186019 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.000999001.

Domain disruption

Disruption of the Fibronectin type III domain was tested with Fisher's exact test comparing in-frame fusions against all others; 57/61 (93.4%) of in-frame fusions disrupted the domain, p=0.0625821 (not statistically significant at alpha=0.05). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.000999001.

Junction concentration

42% of 86 fusions with this gene as the 3' partner join at exon 34, against 1% expected if breakpoints fell at random along the gene; this is the most over-represented junction (empirical p=0.000999001, corrected for testing every exon, statistically significant at alpha=0.05). The random-breakage null assumes a breakpoint anywhere in the gene would be detected. Capture panels such as MSK-IMPACT tile only selected introns, so concentration on panel data is partly by assay design and this p-value overstates the evidence for biological concentration. Confirm in a cohort sequenced without intron selection (whole genome or RNA).

Cutpoint detection

Cutpoint detection scanned 98 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 1693 aa (exon 30; label-permutation p=0.173826). This boundary is descriptive: retained/lost status follows from breakpoint position, so a clean split exists by construction and the p-value is not evidence of selection. This is 25 aa from the nearest configured domain boundary at 1668 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" (n=87) and "not_retained" (n=11). For Frame_status, retained: 56/75 (74.7%, 95% CI 63.8%-83.1%); not_retained: 5/9 (55.6%, 95% CI 26.7%-81.1%). Welch's t-test comparing Tumor_variant_count between groups gave means of 67.6667 vs 19.0909, p=3.65211e-06 (statistically significant at alpha=0.05).

Composite evidence score

Composite evidence score reported: cutpoint_proximity sub-score excluded: corrected cutpoint p-value was missing or >= 0.05, cutpoint was not determinable, or mapped breakpoints were unavailable.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Expression association

Expression association reported: No mRNA expression data was available for ROS1 in this cohort; expression-association analysis was skipped.

Genomic position recurrence

Genomic position recurrence produced results for this run (22 row(s) in genomic_bin_recurrence, 0 row(s) in exact_position_recurrence, 7 row(s) in protein_position_genomic_spread); see the accompanying table.

Joint partner

Joint partner reported: ROS1 has no gene_pair configured; joint-partner analysis was skipped.

Mechanistic interpretation

Mechanistic interpretation produced results for this run; see the accompanying data for details.

Mutation cooccurrence

Mutation cooccurrence reported: ROS1 has no mutual_exclusivity_targets configured; co-occurrence/mutual-exclusivity analysis was skipped.

Window detection

Window detection produced results for this run (65 row(s) in window_scan, 35 row(s) in top_windows); see the accompanying table.

Figures

domain retention outliers

fusion schematic

Partner-block colors are decorative; row labels identify partners.

Showing the top 28 of 40 partner/breakpoint groups by recurrence; see results.tsv for the complete list.

intragenic deletion schematic
